PROFESSIONAL SUMMARY

Full-Stack Developer and Computer Science & Engineering graduate specializing in the MERN stack and Next.js. Designs, builds and deploys web applications end to end — RESTful APIs, JWT authentication with role-based access, real-time features, Stripe payments and responsive, animated interfaces — on Vercel and Render. Brings a research edge from an NLP and machine learning thesis on multilingual (Bangla, English, Banglish) social media text. Committed to clean, maintainable code and polished user experiences.

TECHNICAL SKILLS

Languages	JavaScript (ES6+), TypeScript, Python, C++, PHP, HTML5, CSS3
Frontend	React, Next.js, Tailwind CSS, Framer Motion, Responsive Design
Backend	Node.js, Express.js, RESTful APIs, JWT Auth, Role-Based Access Control
Databases	MongoDB, Mongoose, MySQL
Tools & Platforms	Git & GitHub, Vite, Vercel, Render, Cloudinary, Figma, VS Code
Soft Skills	Problem-Solving, Time Management, Adaptability, Teamwork

PROJECTS

AcademiaConnect — Full-Stack University Platform

[Live Demo](#) | [GitHub](#)

- **Architecture:** Engineered a role-based, three-tier platform (React SPA, Express REST API, MongoDB) that unifies courses, clubs, events, university-wide notices, profiles and an admin panel.
- **Security & access control:** Implemented JWT authentication with bcrypt-hashed passwords and middleware-enforced student/admin roles, including an admin console for managing and promoting users.
- **Real-time & content features:** Built live student messaging with Socket.io, plus course pages with embedded video lectures and PDF notes, using Multer for avatar, thumbnail and note uploads.
- **Engineering & deployment:** Structured the codebase into models, controllers, routes, middleware and socket modules; added a demo-data seed script; deployed the client on Vercel and the API on Render.

Languages & Tools: JavaScript (ES6+), HTML5, CSS3, React 18, Vite, React Router, Tailwind CSS, Axios, Node.js, Express.js, MongoDB, Mongoose, JWT, bcrypt, Socket.io, Multer, Vercel, Render

Vroomly — Peer-to-Peer Car Rental & Booking Marketplace

[Live Demo](#) | [GitHub](#)

- **Architecture:** Designed a full-stack marketplace with role-based portals for renters, vehicle owners (hosts) and admins, using a Next.js 16 (App Router) frontend, an Express REST API and MongoDB.
- **Renter experience:** Built multi-criteria search and filtering, an image gallery, an availability-based date picker, live price estimates, Stripe card payments, and ratings with host replies.
- **Host & admin tools:** Built tiered pricing, availability blocking, booking-conflict resolution and earnings charts for hosts, plus approval queues, complaint handling, ledgers and CSV reports for admins.
- **Integrations:** Integrated Socket.IO for live notifications, Cloudinary for uploads and Google Maps for location; used TanStack Query, React Hook Form and Zod for data fetching and validation.
- **Security & testing:** Protected the API with JWT, Helmet, rate limiting, input validation and NoSQL-injection sanitization; wrote Jest unit tests for pricing, availability and token logic.

Languages & Tools: TypeScript, JavaScript, HTML5, CSS3, Next.js, React, Tailwind CSS, TanStack Query, Node.js, Express.js, MongoDB, Mongoose, JWT, Socket.IO, Stripe, Cloudinary, Google Maps API, Jest, Vercel

- **Architecture:** Developed a full-stack MERN job marketplace (React + Vite, Express, MongoDB) with role-based job-seeker and admin experiences, JWT authentication and bcrypt-hashed passwords.
- **Smart job discovery:** Implemented filtering by category, background, interest, work mode and location, plus nearest-job matching using geocoded coordinates and browser geolocation.
- **Candidate & admin workflows:** Built job detail pages, applications, saved jobs and user preferences, plus an admin dashboard to post, edit and delete listings; seeded realistic roles across engineering, QA and sales.
- **UI/UX:** Crafted a responsive, modern interface with Framer Motion micro-animations, glass-style cards and an animated video-backdrop dashboard; deployed on Vercel.

Languages & Tools: JavaScript (ES6+), HTML5, CSS3, React, Vite, React Router, Framer Motion, Axios, Node.js, Express.js, MongoDB, Mongoose, JWT, bcrypt, Vercel

Riz Restaurant — Restaurant Ordering & Reservation Platform

[Live Demo](#) | [GitHub](#)

- **Architecture:** Built a full-stack ordering and reservation platform with a Next.js storefront and an Express REST API (Helmet, CORS, Morgan) on MongoDB, deployed on Vercel and Render.
- **Ordering experience:** Implemented an animated, responsive menu with category filtering, a cart with quantity controls and extra items, and a home-delivery checkout flow.
- **Server-side pricing integrity:** The API recalculates line totals, extras, delivery fee and final total from live database prices, so the client is never the source of truth.
- **Reservations & admin:** Added party, wedding and corporate reservation booking and a key-protected admin dashboard for managing orders and reservations.

Languages & Tools: JavaScript (ES6+), HTML5, CSS3, Next.js, React, Framer Motion, Node.js, Express.js, MongoDB, Mongoose, Helmet, Morgan, Vercel, Render

RESEARCH THESIS

Unveiling Gender Bias in Social Media Comments: An NLP Analysis on Bangladeshi Influencers

- **Research focus:** Investigated gender bias in audience responses to male and female Bangladeshi influencers by analyzing YouTube comments written in Bangla, English and Banglish (romanized Bangla).
- **Dataset & analysis:** Built a reliable ground-truth dataset through manual annotation, multi-annotator agreement and adjudication; performed statistical analysis of the annotated data.
- **Experiment design:** Prepared stratified train/validation/test splits to support machine learning experiments and model evaluation.
- **NLP analysis:** Applied sentiment, emotion, toxicity and bias analysis, including transformer-based models (BERT, XLM-R), to examine differences in audience responses toward male and female influencers.

Skills: Natural Language Processing (NLP), Machine Learning, Python (Programming Language), Sentiment Analysis, Text Classification

EDUCATION

Bachelor of Science in Computer Science and Engineering

United International University (UIU), Dhaka, Bangladesh

Relevant Coursework: Data Structures and Algorithms (C++), Artificial Intelligence (Python), Web Development (JavaScript, PHP, MySQL), Computer Networks, System Analysis and Design.

LANGUAGES

English — Professional Working Proficiency
